

**Trusted by the wireless carriers to help property owners and enterprises bring high quality, reliable mobile coverage indoors**

### Nearly 80% of wireless usage is indoors

- People expect and need mobile coverage everywhere – phones must work indoors
- Demand for indoor coverage is exponentially increasing, but the carriers’ willingness to provide indoor coverage continues to decrease as they focus on other priorities
- Hospitals frequently have weak cell reception due to insulated walls and other construction materials

### Seamless Integration is Key

- An “integrated signal source” is needed to seamlessly function and have value to its users
- Major carriers must be integrated (Verizon and AT&T are critical)
- Ensure a flexible, low-cost upgrade path to ‘future-proof’ the investment
- Utilize emerging revenue models for property owners to achieve ROI and cost recovery

## Diamond Capabilities

- Diamond works with property owners and enterprises to understand the specific wireless needs and objectives
- Diamond offers a range of solutions that are highly customized to ensure the objectives are met with seamless wireless coverage throughout any size facility
- Diamond has the capability to bring the actual carrier network indoors into any building using the carriers’ equipment and standards for quality that enable seamless integration of their network
- This integration of the carrier network not only ensures a seamless customer experience indoor and out, but also provides a cost-effective way to ensure technology upgrades (e.g., 5G and CBRS)
- Diamond also offers Wi-Fi, CBRS and public safety solutions as part of the indoor wireless system

### Benefits for Hospitals and Healthcare

- Measurable increase in surgeon, physician, nurse and staff productivity
- Enhance surgeon, physician, nurse and staff satisfaction in the workplace
- Enable “Teledoc” and similar technologies to facilitate remote specialist consultations
- Reduce doctor downtime and eliminate inefficient time searching for adequate cell signal – drives increased patient visits
- Enhance patient satisfaction
- Reduce reliance and stress on the Wi-Fi Guest Net
- Enable high-tech technologies such as remote surgeries
- Secure patient data transmission and access

## Diamond Value Proposition

- Diamond’s services range from providing solely the carrier connection to the building, to providing comprehensive solutions for all wireless needs with fully inclusive turnkey services including system design, installation and integration for DAS, Wi-Fi and public safety
- Diamond has the ability to provide multi-carrier wireless coverage to the building
- Our solutions ensure that the building is “fully integrated” into the core network of each major carrier
